GLP LABORATÓRIOS

CONFIDENCE IN EVERY RESULT

Oil & Gas and NORM materials

OIL & GAS · NORM

NORM characterization for Oil & Gas

Radiometric analysis and field measurement for onshore, offshore and decommissioning operations.

Own laboratory | Accredited in situ gamma

Safe decisions require reliable data.

Petrobras project: characterization of NORM-containing material from the Oil & Gas industry by in situ gamma spectrometry.

How GLP supports your operation

Produced water

Identification and quantification of natural radionuclides for monitoring and process assessment.

Maintenance and cleaning

Report for handling, storage, treatment or disposal of materials.

Sludge, scale and sediments

Characterization of waste from tanks, separators, pipelines and equipment.

Decommissioning

Radiological characterization of structures and materials before removal and final disposal.

Credentials

ABNT NBR ISO/IEC 17025 · CRL 1266 · ALMERA Network

Highly skilled technical specialists and radiation protection supervisors.

Facility licensed by ANSN

National Nuclear Safety Authority

References and radionuclides

Radium-226, Radium-228, Lead-210, Uranium and Thorium, by gamma and alpha spectrometry, liquid scintillation and proportional counter.

ANSN 3.01/2024 | ANSN 8.01

Applied according to demand.

Applications: onshore and offshore production, FPSOs, tank cleaning, waste management and decommissioning.
