GLP LABORATÓRIOS

CONFIDENCE IN EVERY RESULT

Leak Test · Sealed radioactive sources

RADIATION PROTECTION · SEALED SOURCES

Wipe Test
Leak Test

An essential control to verify the integrity of sealed radioactive sources, with radiometric analysis and a traceable report.

Own laboratory | ISO/IEC 17025 accredited

Safe decisions require reliable data.

The test assesses whether there are signs of radioactive material being released from a sealed source, supporting the decision of the Radiation Protection Service.

How GLP supports your operation

Why do it

Identifies possible signs of contamination before they pose risks to workers, the public, the environment or operational continuity.

Types of test

Dry Wipe Test, wet Wipe Test or liquid scintillation immersion, depending on the source, its geometry and the radionuclide.

Where it applies

Nuclear level, density or thickness gauges, industrial irradiators, laboratories, calibration sources, research and medical services.

How it is performed

Sampling by controlled rubbing with absorbent material at specific points on the source, followed by radiometric analysis in the laboratory.

Credentials

ABNT NBR ISO/IEC 17025 · CRL 1266 · ALMERA Network

Highly skilled technical specialists and radiation protection supervisors.

Facility licensed by ANSN
National Nuclear Safety Authority

References and criteria

Detection limits per ISO 9978:2020, acceptance criteria for a non-leaking source and traceability per ISO/IEC 17025:2017.

ISO 9978:2020 | ISO/IEC 17025:2017

Frequency according to the Radiation Protection Plan.
