

GLP LABORATÓRIOS

TECHNICAL PARTNERSHIP

Solutions for partner laboratories

Environmental and food radiometric testing with reliable technical data, regulatory compliance, and support for the partner laboratory's routine.

- Committed to the future
- Brazilian laboratory
- Broadest scope of radiometric analyses

WWW.GLPLAB.COM.BR

Technical partnership for critical needs

Technical and regulatory assurance as a differentiator for partner laboratories.

01 Specialization in environmental radiometric testing

02 International expertise in the analytical and regulatory fields of radiation protection

03 Operations driven by compliance, traceability, and quality

04 **Complementary model**, without competing with the partner laboratory's routine work

Food testing

Food safety control through radiometric methods.

Meeting **national and international** quality and safety requirements.

Reliable technical reports for assessing radioactivity in food.

Support for the **export** process in line with importing countries' criteria.

Validated methods and metrological traceability of samples.

MAIN RADIOMETRIC DETERMINATIONS

Cs-134 · Cs-137 · I-131 · Sr-89 · Sr-90 · Ru-103 · Ru-106 · Am-241 · Pu-238 · Pu-239 · Pu-240 · K-40 · Ac-228

Matrices: meat products, dairy, grains and cereals, beverages, fruits and vegetables.

Required testing for food

Examples of radiometric requirements for food products of Brazilian origin.

BODY / REGULATOR	CATEGORY	RADIONUCLIDES ANALYZED
FDA	Food in general	I-131 · Cs-134 + Cs-137 · Ru-106 + Ru-103 · Sr-90 · Pu-238 + Pu-239 + Am-241
FAO	Food in general	Pu-238 + Pu-239 + Pu-240 + Am-241 · Sr-90 + Ru-106 + I-129 + I-131 + U-235 · S-35 + Co-60 + Sr-89 + Ru-103 + Cs-134 + Cs-137 + Ce-144 + Ir-192
European Union	Infant, dairy, and liquid foods	Cs-134 + Cs-137 · Sr-90 · I-131 · Pu-239 + Am-241

Illustrative examples: the required set varies according to the importing country and the product matrix.

05 · ENVIRONMENTAL

Environmental testing

Low radiological risk, drinking water, and environmental matrices.

Gross alpha and beta radioactivity; Tritium (H-3); Radon (Rn-222)

Radionuclides from the Uranium and Thorium series

Total Uranium and Thorium in environmental matrices

Soils, water, sediments, food, and vegetation

BRAZIL

Portaria GM/MS nº 888/2021 and ANSN NN 3.01/2024

EUROPEAN UNION

Directive 2013/51/Euratom

Technical differentiator: Cgcre accreditation for these tests, in accordance with ABNT NBR ISO/IEC 17025.

From sampling to results

A structure focused on technical quality, with an accredited scope that strengthens confidence in traceable and auditable results.

ABNT NBR ISO/IEC 17025

Accreditation certificate · CRL 1266

ANSN

Licensed facility

ALMERA

International analytical network

IAEA

Reference in environmental radioactivity

Accreditation certificates and proficiency testing program participation certificates.

Quality and operating model

Analytical excellence for requirements that demand method, control, and documentation.

01
Validated analytical methods

02
Metrological traceability of samples

03
Compliance with applicable standards and guidelines

04
Execution according to established procedures

05
Clear, consistent, and auditable technical reports

06
Support with regulatory interpretation and classification

Analytical rigor, regulatory insight, and technical communication all on the **same track**.

Institutional profile

Work dedicated to technical collaboration with partner laboratories.

A laboratory focused on **environmental radiometric testing**.

A structure driven by quality, traceability, and regulatory compliance.

A technical team experienced in both national and international contexts.

Scope accredited by **Cgcre** in accordance with ABNT NBR ISO/IEC 17025.

Specialization that **expands the partner's technical capacity**.

Partnership principles

A partnership built to be complementary, collaborative, and transparent. GLP acts as specialized technical support, **not as a competitor**.

01

Portfolio expansion

Backed by a technical partner you can trust.

02

Critical needs

Support for specialized testing outside routine work.

03

Risk reduction

Processes aligned with regulatory requirements.

04

Reliable support

Recurring projects and one-off requests.

Operating models

Flexibility according to the partner laboratory's needs.

On demand

One-off engagement for specific testing and non-recurring needs.

Ongoing partnership

Structured technical workflow for frequent needs.

Environmental projects

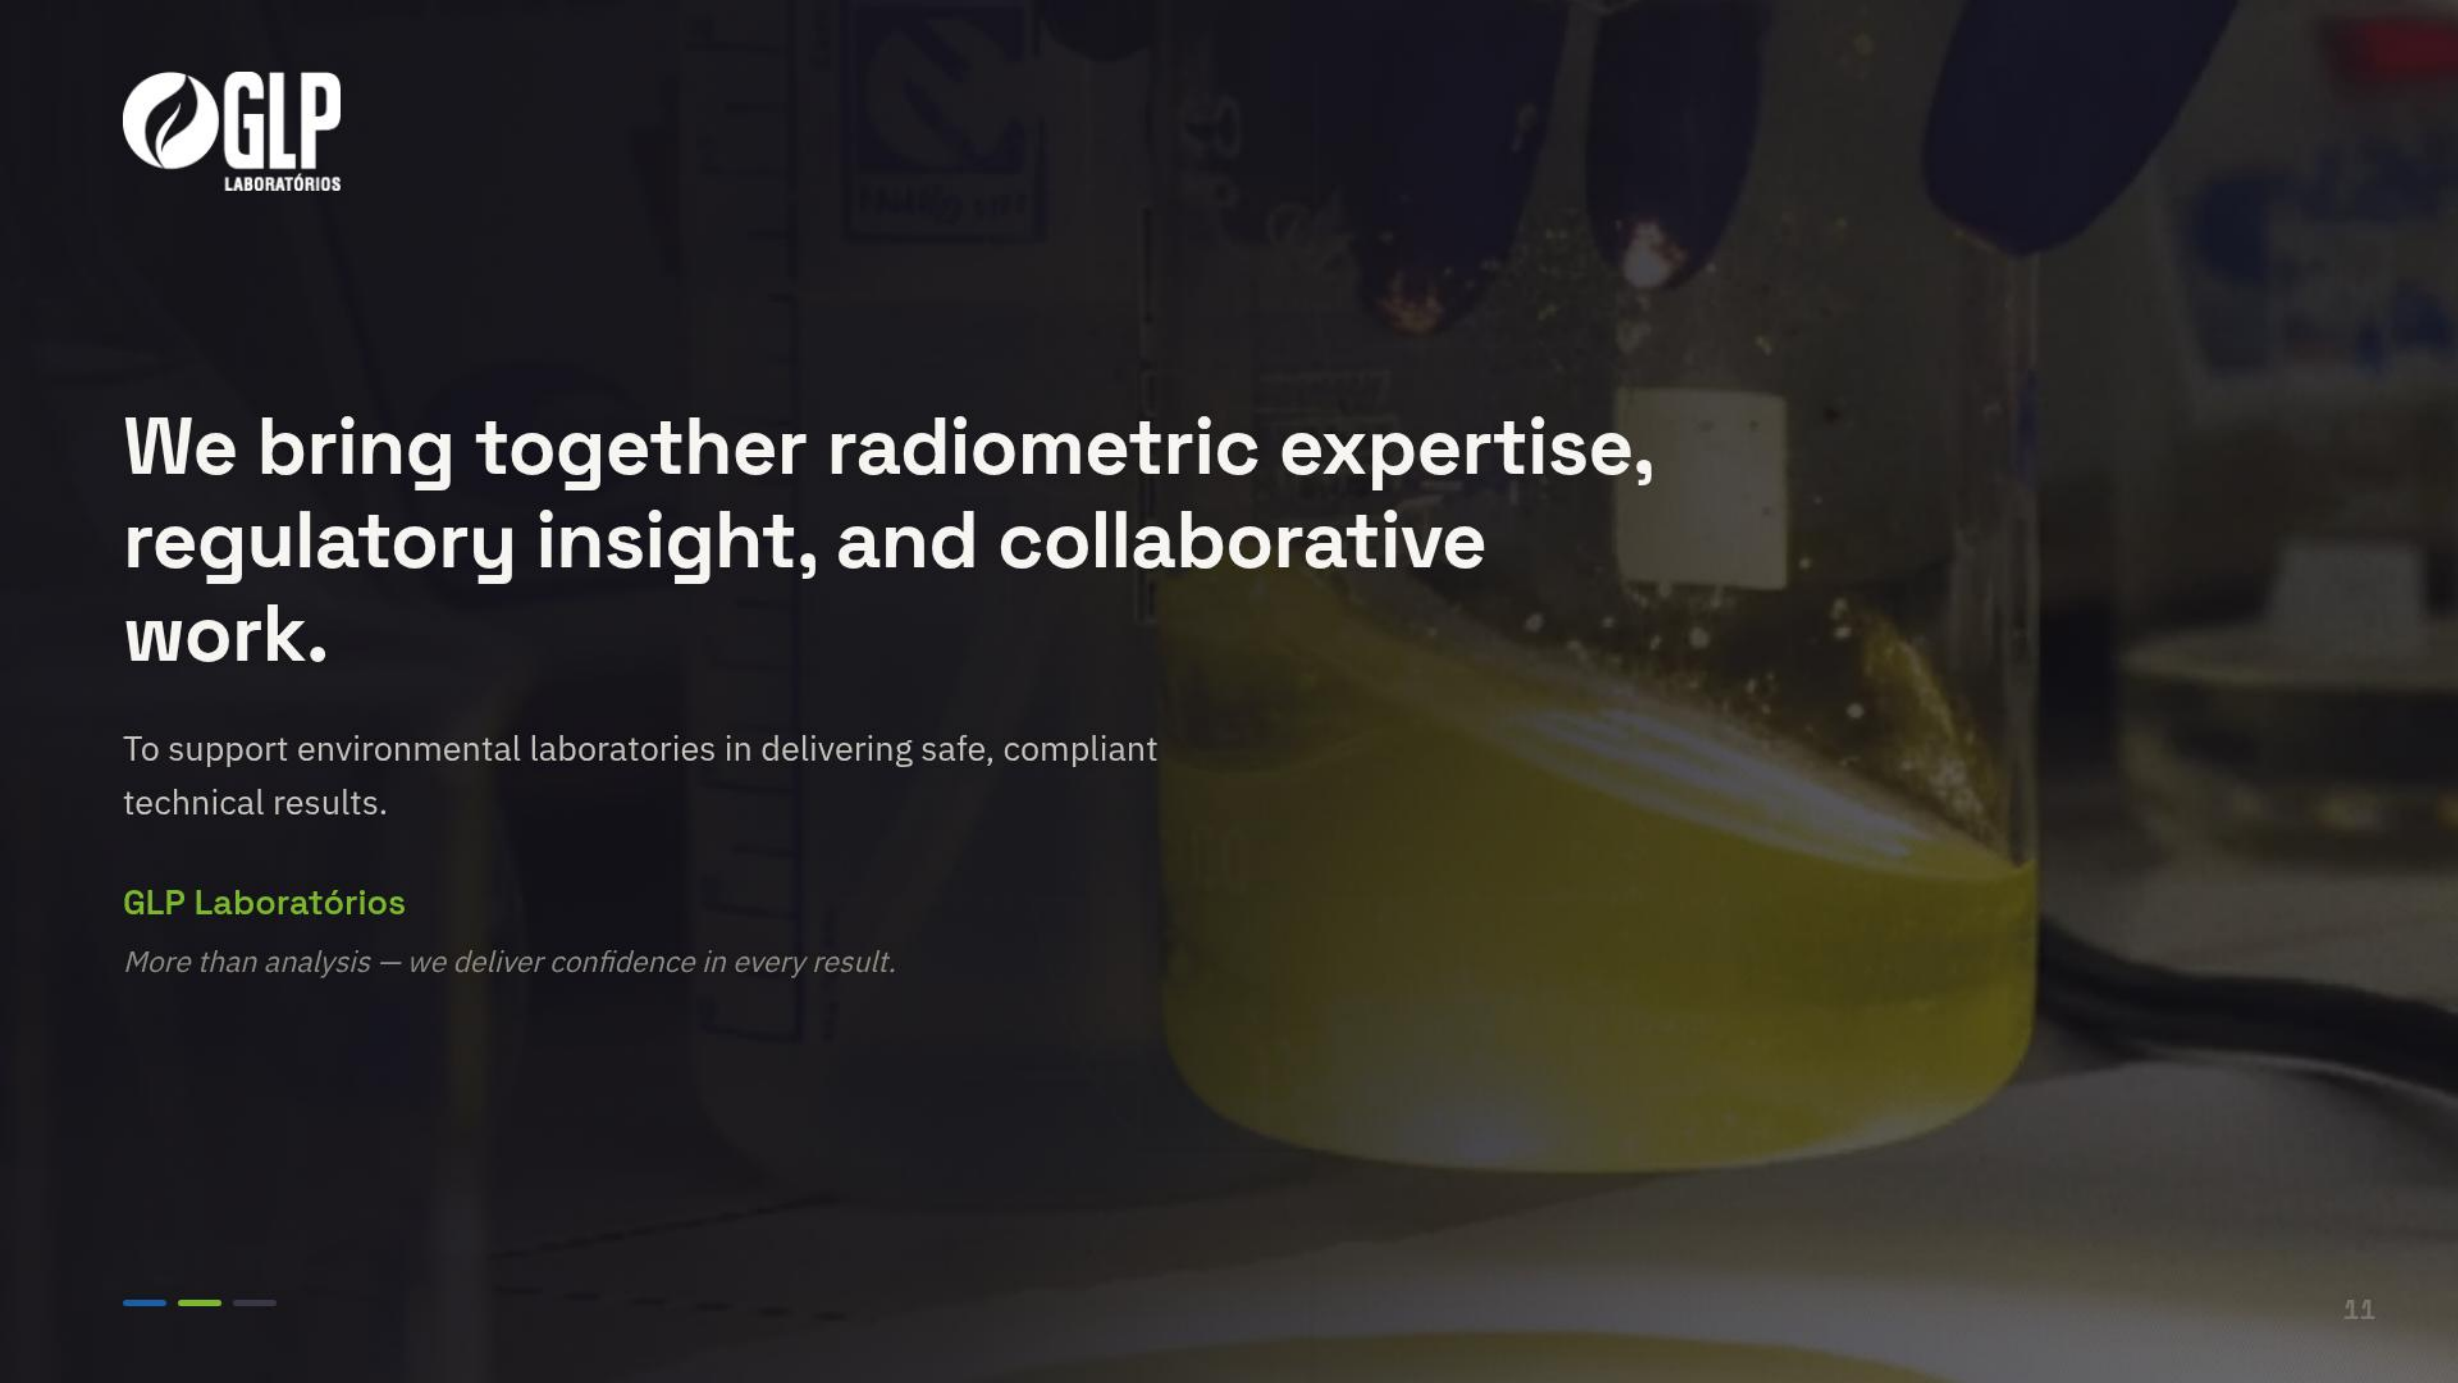

Support for radiometric campaigns, programs, and studies.

Audits and requirements

Technical documentation and guidance on applicable requirements.

GLP fits its radiometric expertise into the partner's operation with **clarity and predictability**.

We bring together radiometric expertise, regulatory insight, and collaborative work.

To support environmental laboratories in delivering safe, compliant technical results.

GLP Laboratórios

More than analysis — we deliver confidence in every result.

GLP LABORATÓRIOS

Let’s build this partnership.
