GLP LABORATÓRIOS

CORPORATE · 2026

Brazil’s largest radiometric laboratory

Accredited radiometric testing for the environment, food, mining, oil & gas, and partner laboratories.

- Since 2015
- ISO/IEC 17025 · CRL 1266
- Piracicaba · SP

WWW.GLPLAB.COM.BR

02 · WHO WE ARE

Specialists in ionizing radiation

GLP Laboratórios was founded in **2015**, in Piracicaba/SP, with the goal of becoming a national reference in radiometric testing.

Today it brings together its own analytical infrastructure, a multidisciplinary team, and the broadest radiometric scope in the country — from sample receipt to report issuance.

Experience

Professionals with more than 10 years in the field

Technology

High-sensitivity equipment

Agility

Reduced turnaround times and competitive pricing

Mission, vision and values

Mission

To be a reference in the field through quality management, technological innovation, valuing employees and clients, and social and environmental responsibility.

Vision

To be among the leading market players and be recognized for excellence in analytical services.

Values

- **Customer satisfaction**
- **Social responsibility**
- **Respect for the environment**
- **Conduct**
- **Excellence**

Where we operate

Six segments served by the same accredited analytical infrastructure.

Environmental

Water, soil, sediment, vegetation, and air filters. Monitoring and compliance with Portaria GM/MS 888/2021.

Food

Radiometric testing for food safety, certification, and export in accordance with FDA, FAO, and European Union requirements.

Mining

NORM, radiological licensing with ANSN, PMRA, and clearance for ore exports.

Oil & Gas

NORM characterization in produced water, sludge, scale, pipelines, and decommissioning.

Partner Laboratories

A complementary model: we expand our partners' portfolio without competing with their routine work.

Research & Development

Development of methods and custom projects for clients' specific needs.

Ionizing radiation testing

Four complementary techniques cover alpha, beta, and gamma emitters in any matrix.

Alpha Spectrometry

Radiochemical separation, concentration of the radionuclide of interest, and silicon detection.

Gamma Spectrometry

Identification and quantification of natural and anthropogenic gamma emitters across multiple matrices.

Liquid Scintillation

Low-energy beta radionuclides, such as Tritium, with prior analytical chemistry.

Proportional Counter

Gross alpha and beta and, after separation, Ra-226, Ra-228, Sr-90, and Pb-210.

Key determinations

Natural and artificial radionuclides determined in environmental, food, and industrial matrices.

Radium and Lead

Ra-226 · Ra-228 · Pb-210 · Pb-214

Uranium and Thorium

U-238 · U-235 · U-234 · Th-232 · Th-230 · Total Uranium · Total Thorium

Cesium and Iodine

Cs-134 · Cs-137 · I-131

Strontium and Ruthenium

Sr-89 · Sr-90 · Ru-103 · Ru-106

Plutonium and Americium

Pu-238 · Pu-239 · Pu-240 · Am-241

Other

Gross Alpha · Gross Beta · H-3 · Rn-222 · K-40 · Ac-228 · Co-60 · Ir-192

07 · QUALITY

Quality System

Accredited by Inmetro's **General Coordination for Accreditation (Cgcre)** under ABNT NBR ISO/IEC 17025:2017, registration number **CRL 1266** — including testing for Ra-226, Ra-228, and Tritium.

View the accredited scope (CRL 1266) ↗

- **Internal quality control throughout the entire analytical routine**
- **Participation in proficiency testing programs from recognized bodies**
- **Quality Assurance department operating company-wide**
- **Continuous team training on ISO/IEC 17025 requirements**

Credentials behind every report

ISO/IEC 17025

Cgcre/Inmetro accreditation · CRL 1266

ANSN

Facility licensed by the National Nuclear Safety Authority

ALMERA Network

Environmental radioactivity measurement

IAEA

International proficiency testing

Accreditation certificates and certificates of participation in national and international proficiency testing programs.

Regulatory compliance

Compliance with national requirements and those of major importing markets.

Brazil

- **Portaria GM/MS No. 888/2021** — drinking water potability for human consumption
- **ANSN NN 3.01/2024** — Basic Requirements for Radiological Protection and Safety of Radiation Sources
- **ANSN NN 4.01/16** — mining and industrial facilities
- **Portaria DRS No. 09/13** — phosphogypsum for agricultural and cement use
- **Portaria 146 (MAPA)** — radionuclides in food

International market

- **Directive 2013/51/Euratom** — radioactive substances in drinking water in the EU
- **European Union** — infant food, dairy, and liquids
- **FDA** — food in general, including CPG 555.880
- **FAO** — radiometric requirements for food
- **ANSN clearance** — export of raw materials and minerals

10 · SEGMENT

Environmental

GLP was born in environmental monitoring, with a focus on low-radioactivity samples. Today it serves complete programs across multiple matrices.

- **Drinking water**
- **Sediment**
- **Soil**
- **Vegetation**
- **Air filters**
- **Brackish water**
- **Saline water**
- **Effluents**

KEY ANALYTICAL SERVICES

Gross Alpha and Beta · Ra-226 · Ra-228 · H-3 · Sr-90 · Total Uranium · Total Thorium · U-238 · Th-232 · Pb-210 · Rn-222

11 · SEGMENT

Food

Radiometric testing required by domestic and international markets, with reports issued to assess radioactivity levels in accordance with importing countries' requirements.

Meat products
Beef, pork, and poultry

Dairy
Milk and dairy products

Grains and cereals
Coffee, yeast, nuts, and peanuts

Beverages
Non-alcoholic and mineral water

Fruits and vegetables
Fresh and processed

Infant food
Formula and food for infants

Radiometric analysis certificates for **export**, in accordance with FDA, FAO, European Union, and Portaria 146 (MAPA).

Mining and Oil & Gas

Naturally occurring radioactive materials (NORM) require characterization, licensing, and monitoring — services delivered by highly qualified technical experts.

Mining

- Radiological licensing and accreditation with ANSN
- Pre-operational, operational, and decommissioning PMRA
- Rn-222 and ambient radiation monitoring
- ANSN clearance for ore exports
- Specialized radiological protection services

Oil & Gas

- Produced water, sludge, scale, and sediment
- Pipelines, tanks, separators, and process equipment
- FPSOs and offshore units
- In situ gamma spectrometry and decommissioning

13 · MODEL

Partner Laboratories

A partnership built in a complementary, collaborative, and transparent way. GLP acts as specialized technical support — **not as a competitor**.

01 Portfolio expansion
Backed by a technical partner you can trust.

02 Critical demands
Specialized testing outside the routine.

03 Risk reduction
Processes aligned with regulatory requirements.

04 Reliable support
Recurring projects and one-off requests.

From sample to report

Five steps between first contact and the signed report.

1

Sales contact

Definition of scope, matrix, and radionuclides of interest.

2

Sampling and receipt

Sampling plan, field collection, or sample shipment to the laboratory.

3

Preparation and analysis

Analytical chemistry and application of the technique appropriate to the matrix.

4

Quantification

Determination of activity concentration with quality control.

5

Technical report

Traceable and auditable results, also available through Online Results.

Reduced turnaround times, metrological traceability, and support with **interpreting and classifying results under applicable regulations**.

Companies that trust GLP

Technical relationships built with industry, mining, energy, food, consulting, and laboratory partners.
