

GLP LABORATÓRIOS

MINING · NORM

Solutions for mineral-industrial facilities

Portfolio of services, testing and technical advisory for mining, NORM and environmental radiological monitoring.

- Committed to the future
- Brazilian laboratory
- Broadest radiometric scope

WWW.GLPLAB.COM.BR

Our services

Integrated response to radiological demands in mining, industry and the export chain.

Specialized technical consulting

Meeting regulatory requirements for mining and NORM: radiation protection, licensing, PMRA and mineral exports.

Environmental testing

Environmental matrices for radiological environmental monitoring programs.

Special testing

Ores, NORM, tailings, effluents and special waste.

Food

Radiometric testing for food safety, export and certification.

From initial characterization to the technical report, GLP Laboratórios organizes the analytical journey with a focus on **compliance** and **traceability**.

03 · OPERATIONS

Excellence in radiological services

Projects for assessing and controlling environmental impacts at mineral-industrial operations, with advisory support for licensing, training, plans, reports, sampling, and radiometric and radiochemical testing.

Radiation protection

Plans and technical routines

Licensing

CNEN and applicable requirements

Monitoring

PMRA and analytical fieldwork

Legal requirements

GLP Laboratórios offers specialized services to help mining companies, physical and chemical ore-processing plants, and metallurgical operations that handle NORM material meet applicable legal requirements.

CNEN NN 3.01/14
Basic Guidelines for Radiological Protection

Portaria DRS nº 09/13
Verification and analysis of phosphogypsum for agricultural and cement industry use

CNEN NN 4.01/16
Safety and radiological protection for mineral-industrial facilities

Posição Regulatória 3.01/008:2011
Environmental Radiological Monitoring Program

CNEN NN 8.01
Management of low- and intermediate-level radioactive waste

CNEN Clearance
Export of raw materials and minerals

NORM · PMRA

05 · DIFFERENTIATORS

Only at GLP Laboratórios

Solutions designed for regulatory compliance, analytical quality and safety in radiological licensing activities.

01 Specialized team

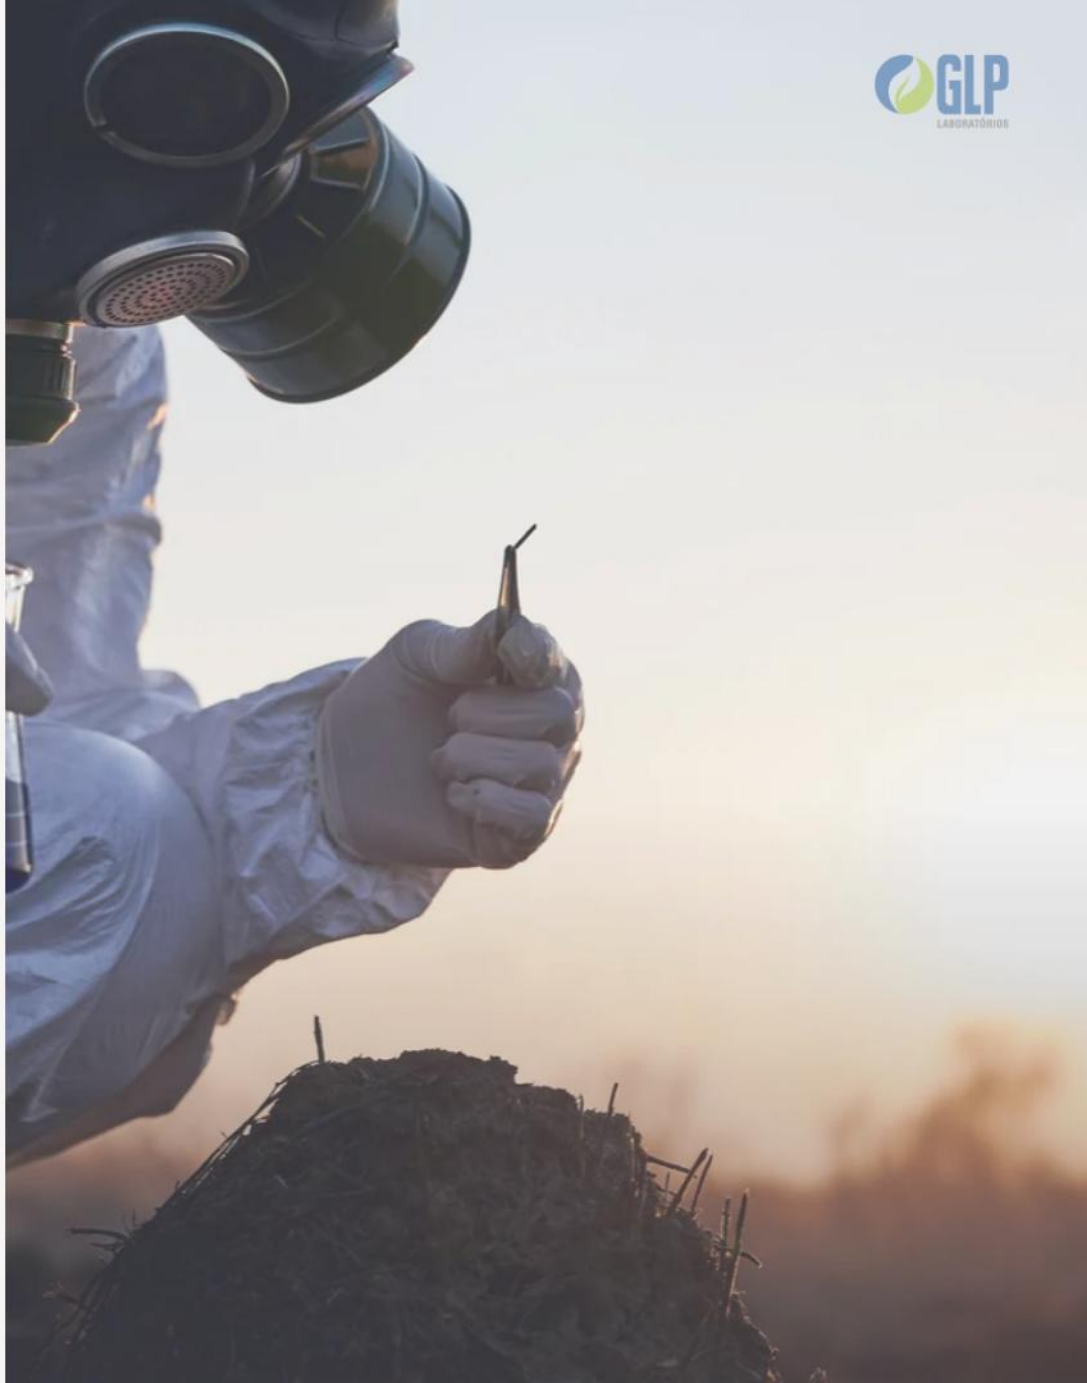

Radiochemists, chemists, a physicist, engineers and radiation protection supervisors.

02 In-house laboratory

Analytical base for radiometric and radiochemical testing.

03 Field perspective

Sampling, monitoring and plans integrated into operational routines.

Quality structure

Accreditations and qualifications that underpin GLP's technical competence.

ABNT NBR ISO/IEC 17025

Cgcre Accreditation · CRL 1266

ANSN

Facility licensed by the National Nuclear Safety Authority (ANSN)

ALMERA Network

Environmental radioactivity measurement · IAEA

> The quality structure enables GLP to meet national and international demands with **traceability**, **standardization** and **analytical reliability**.

Recognized certifications

International recognitions that attest to technical competence and performance across different areas.

Cgcre
Accreditation certificate

IRD
National intercomparison

IAEA
Proficiency testing

IAEA
Water and sediments

ERA
RAD 120 proficiency testing

Technical competence demonstrated through **proficiency testing programs**, certifications and industry recognitions.

08 · TEAM

Technical team

Multidisciplinary team for radiation protection, radiometric testing and the environment, with expertise applied in Brazil and abroad.

- Preliminary information report
- Radionuclide study and characterization
- PMRA development and execution
- Occupational safety analysis report
- Environmental and operational radiometric survey
- Sampling plan and field services
- NORM radiation protection training
- Radon and ambient radiation monitoring
- Source physical protection plan

Licensing and radiological protection

Areas of operation for mining and mineral-industrial facilities.

CNEN Radiological licensing

- Facility accreditation with CNEN
- Authorization for possession and use involving associated uranium and thorium
- Decommissioning plan

PMRA Plans and documentation

- Occupational Radiological Protection Plan (PPRO)
- Pre-operational, operational and decommissioning PMRA
- Testing at our own accredited laboratory

Rn Field and training

- Radon-222 and ambient radiation monitoring
- Training for occupationally exposed workers (IOE) and members of the public
- Collection of environmental and process samples

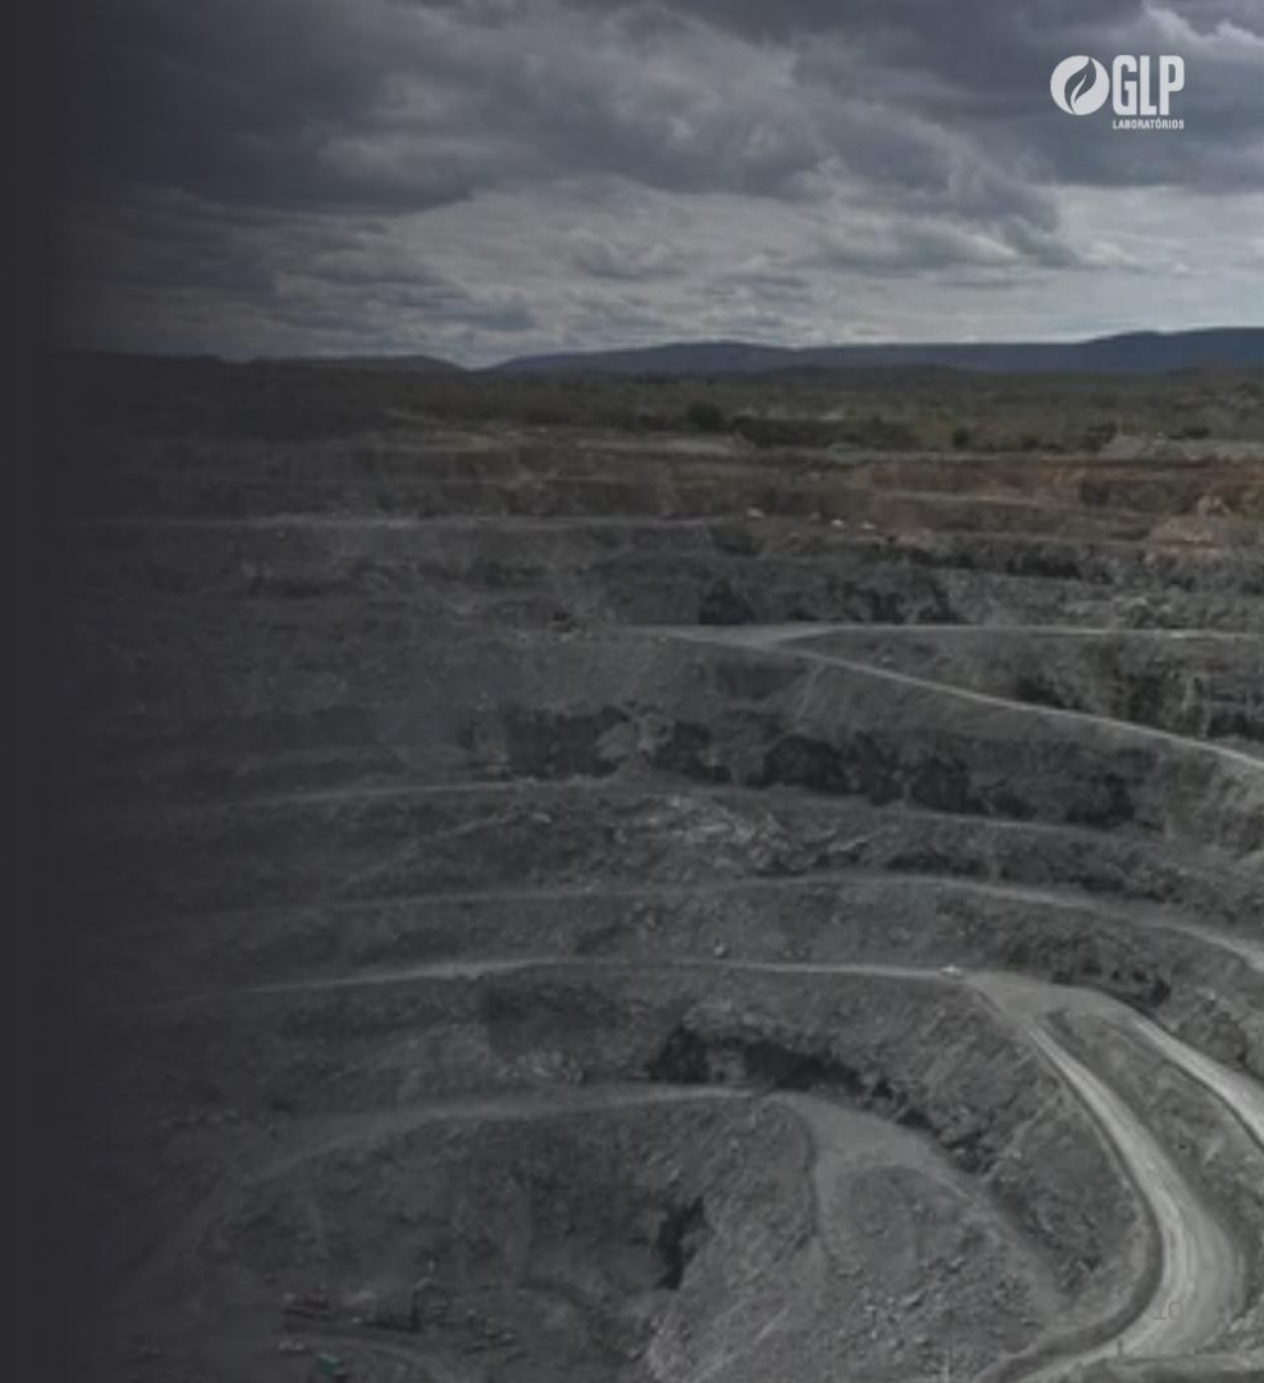

• 10 · SERVICES PERFORMED

PROJECT

Santa Quitéria

Radiometric testing for the implementation of **PMRA-PO (Uranium)**, including monitoring of ambient radiation and Rn-222.

- 01 · PMRA-PO
- 02 · Ambient radiation
- 03 · Rn-222

Licensing and export

PROJECT

Ilmenite

Technical advisory and radiometric testing for radiological licensing (Vanadium/Ilmenite) and export.

PROJECT

Rare Earths I

Technical advisory and testing for radiological licensing and implementation of PMRA-PO (Rare Earths).

Pre-operational and monitoring

PROJECT

Rare Earths II

Technical advisory and testing for pre-operational radiological licensing.

PROJECT

Catalão Phosphogypsum

Monitoring of Ra-226 and Ra-228 levels in phosphogypsum to comply with Portaria DRS nº 09/13.

Sampling and mass balance

PROJECT

Tantalum / Niobium

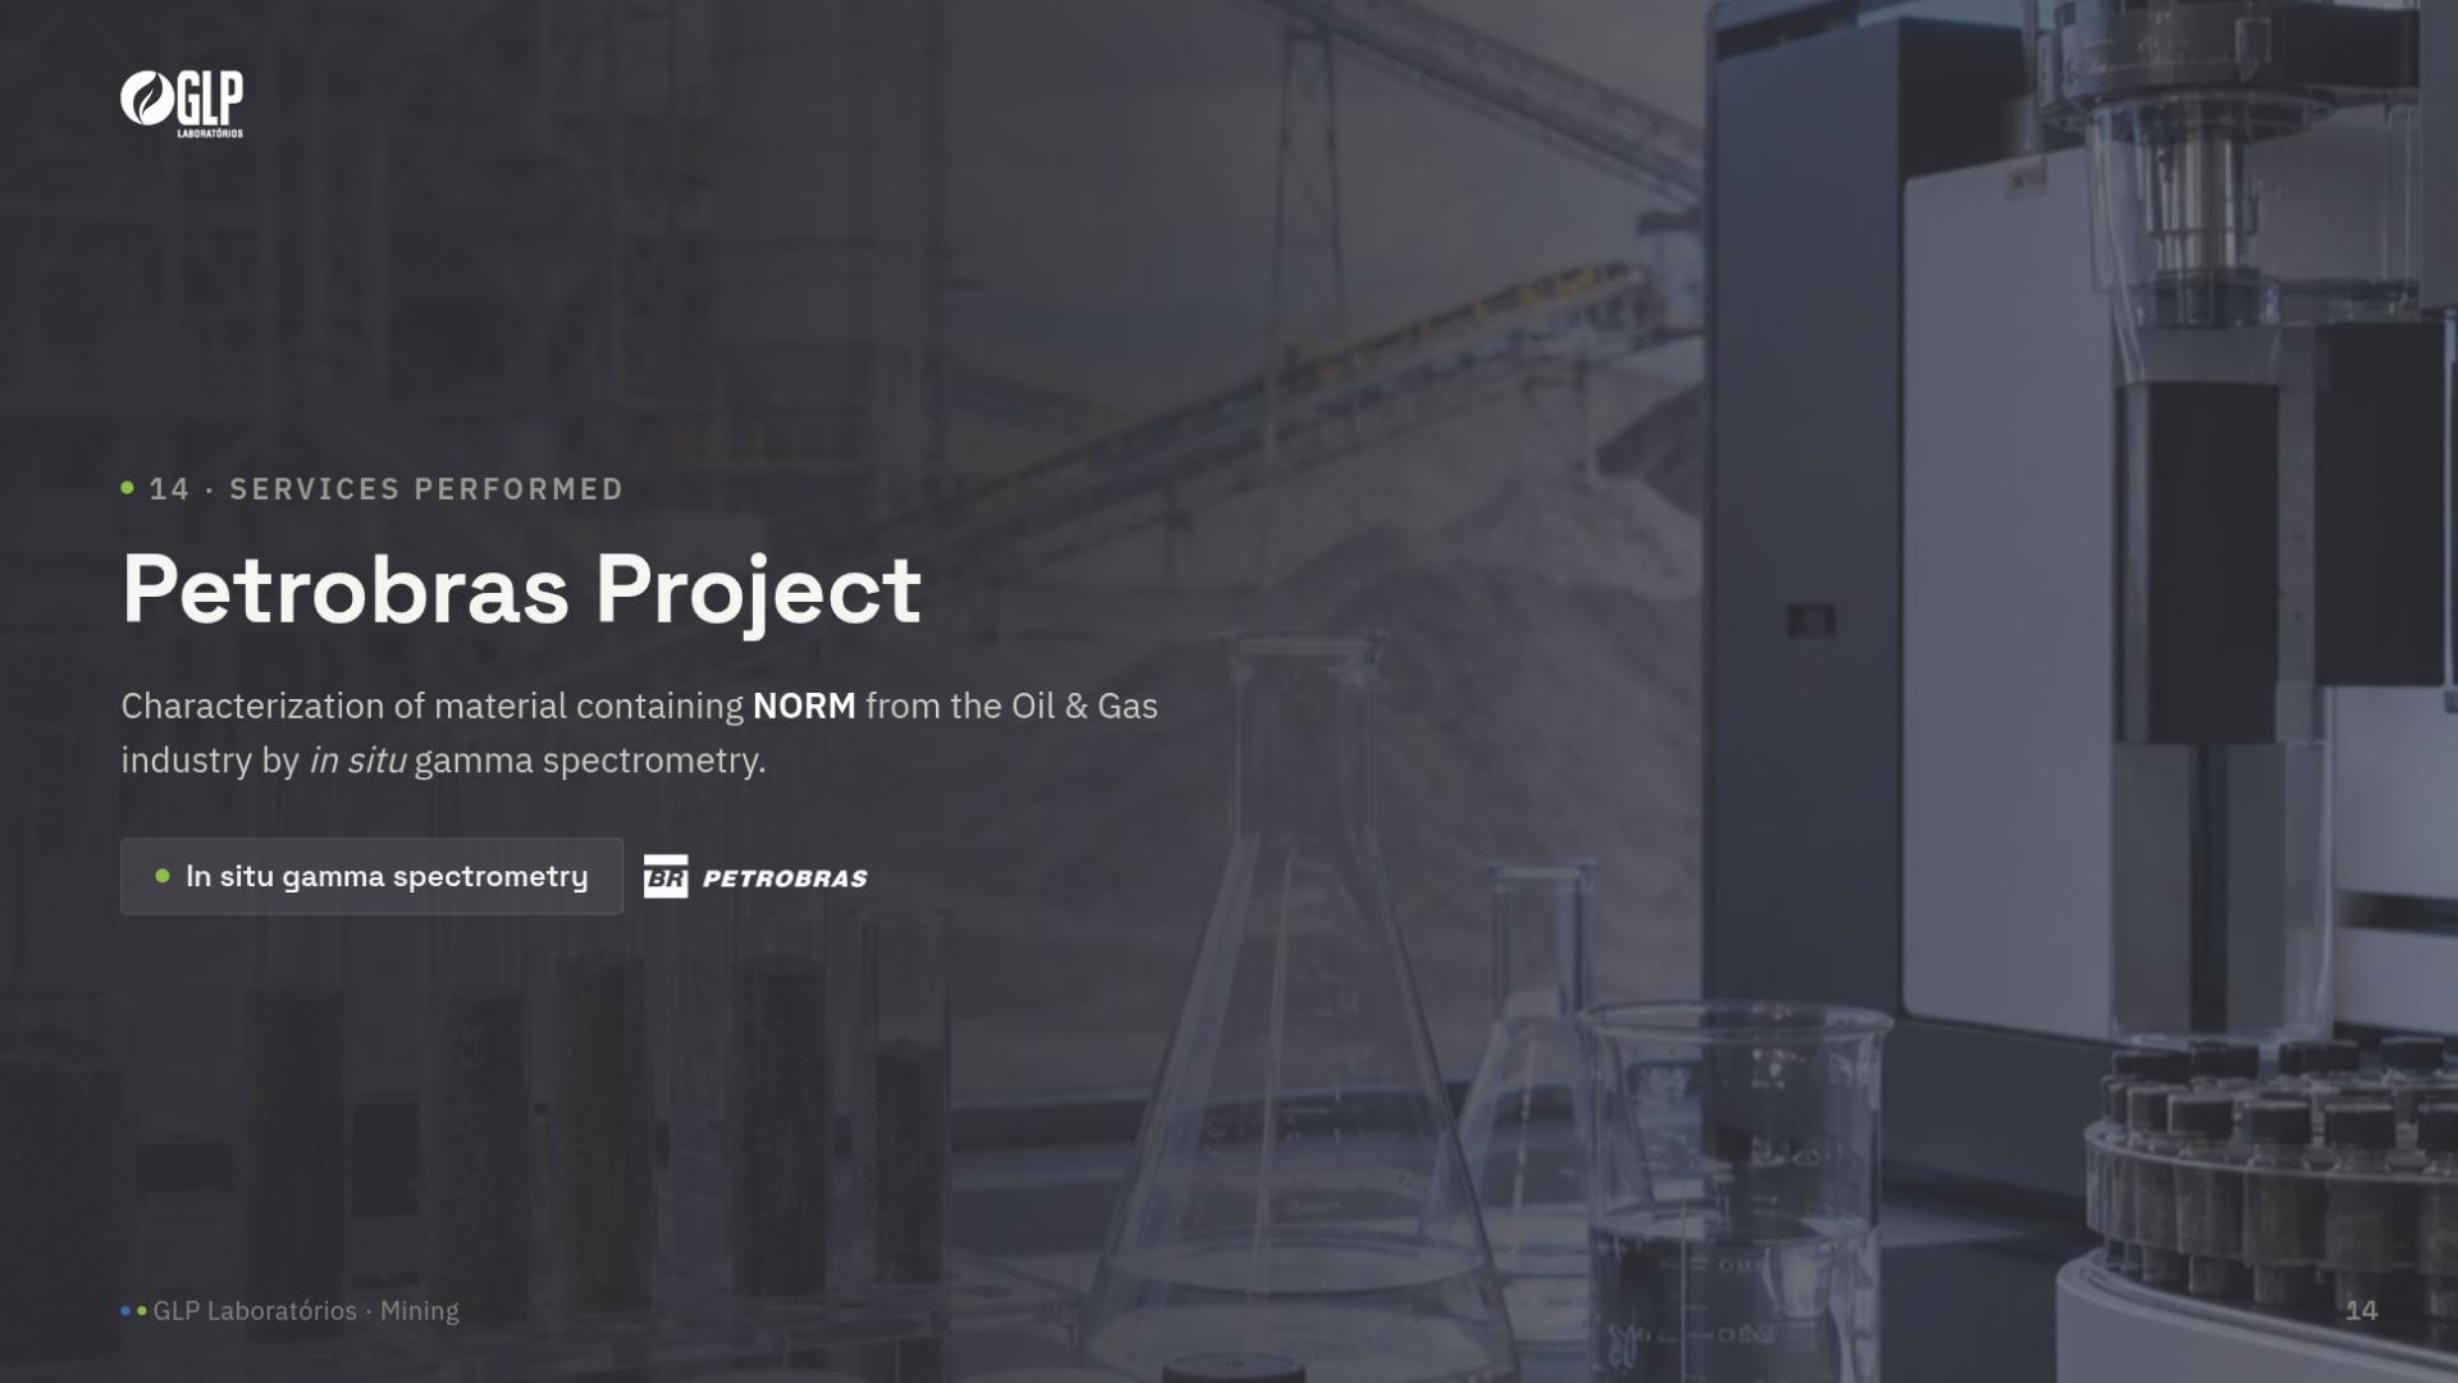

Sampling and radiometric testing of environmental matrices at a mine located in São João del-Rei/MG.

PROJECT

Magnetite

Radiometric testing for the assessment and determination of radioactive mass balance.

14 · SERVICES PERFORMED

Petrobras Project

Characterization of material containing **NORM** from the Oil & Gas industry by *in situ* gamma spectrometry.

In situ gamma spectrometry

PETROBRAS

Companies that trust GLP

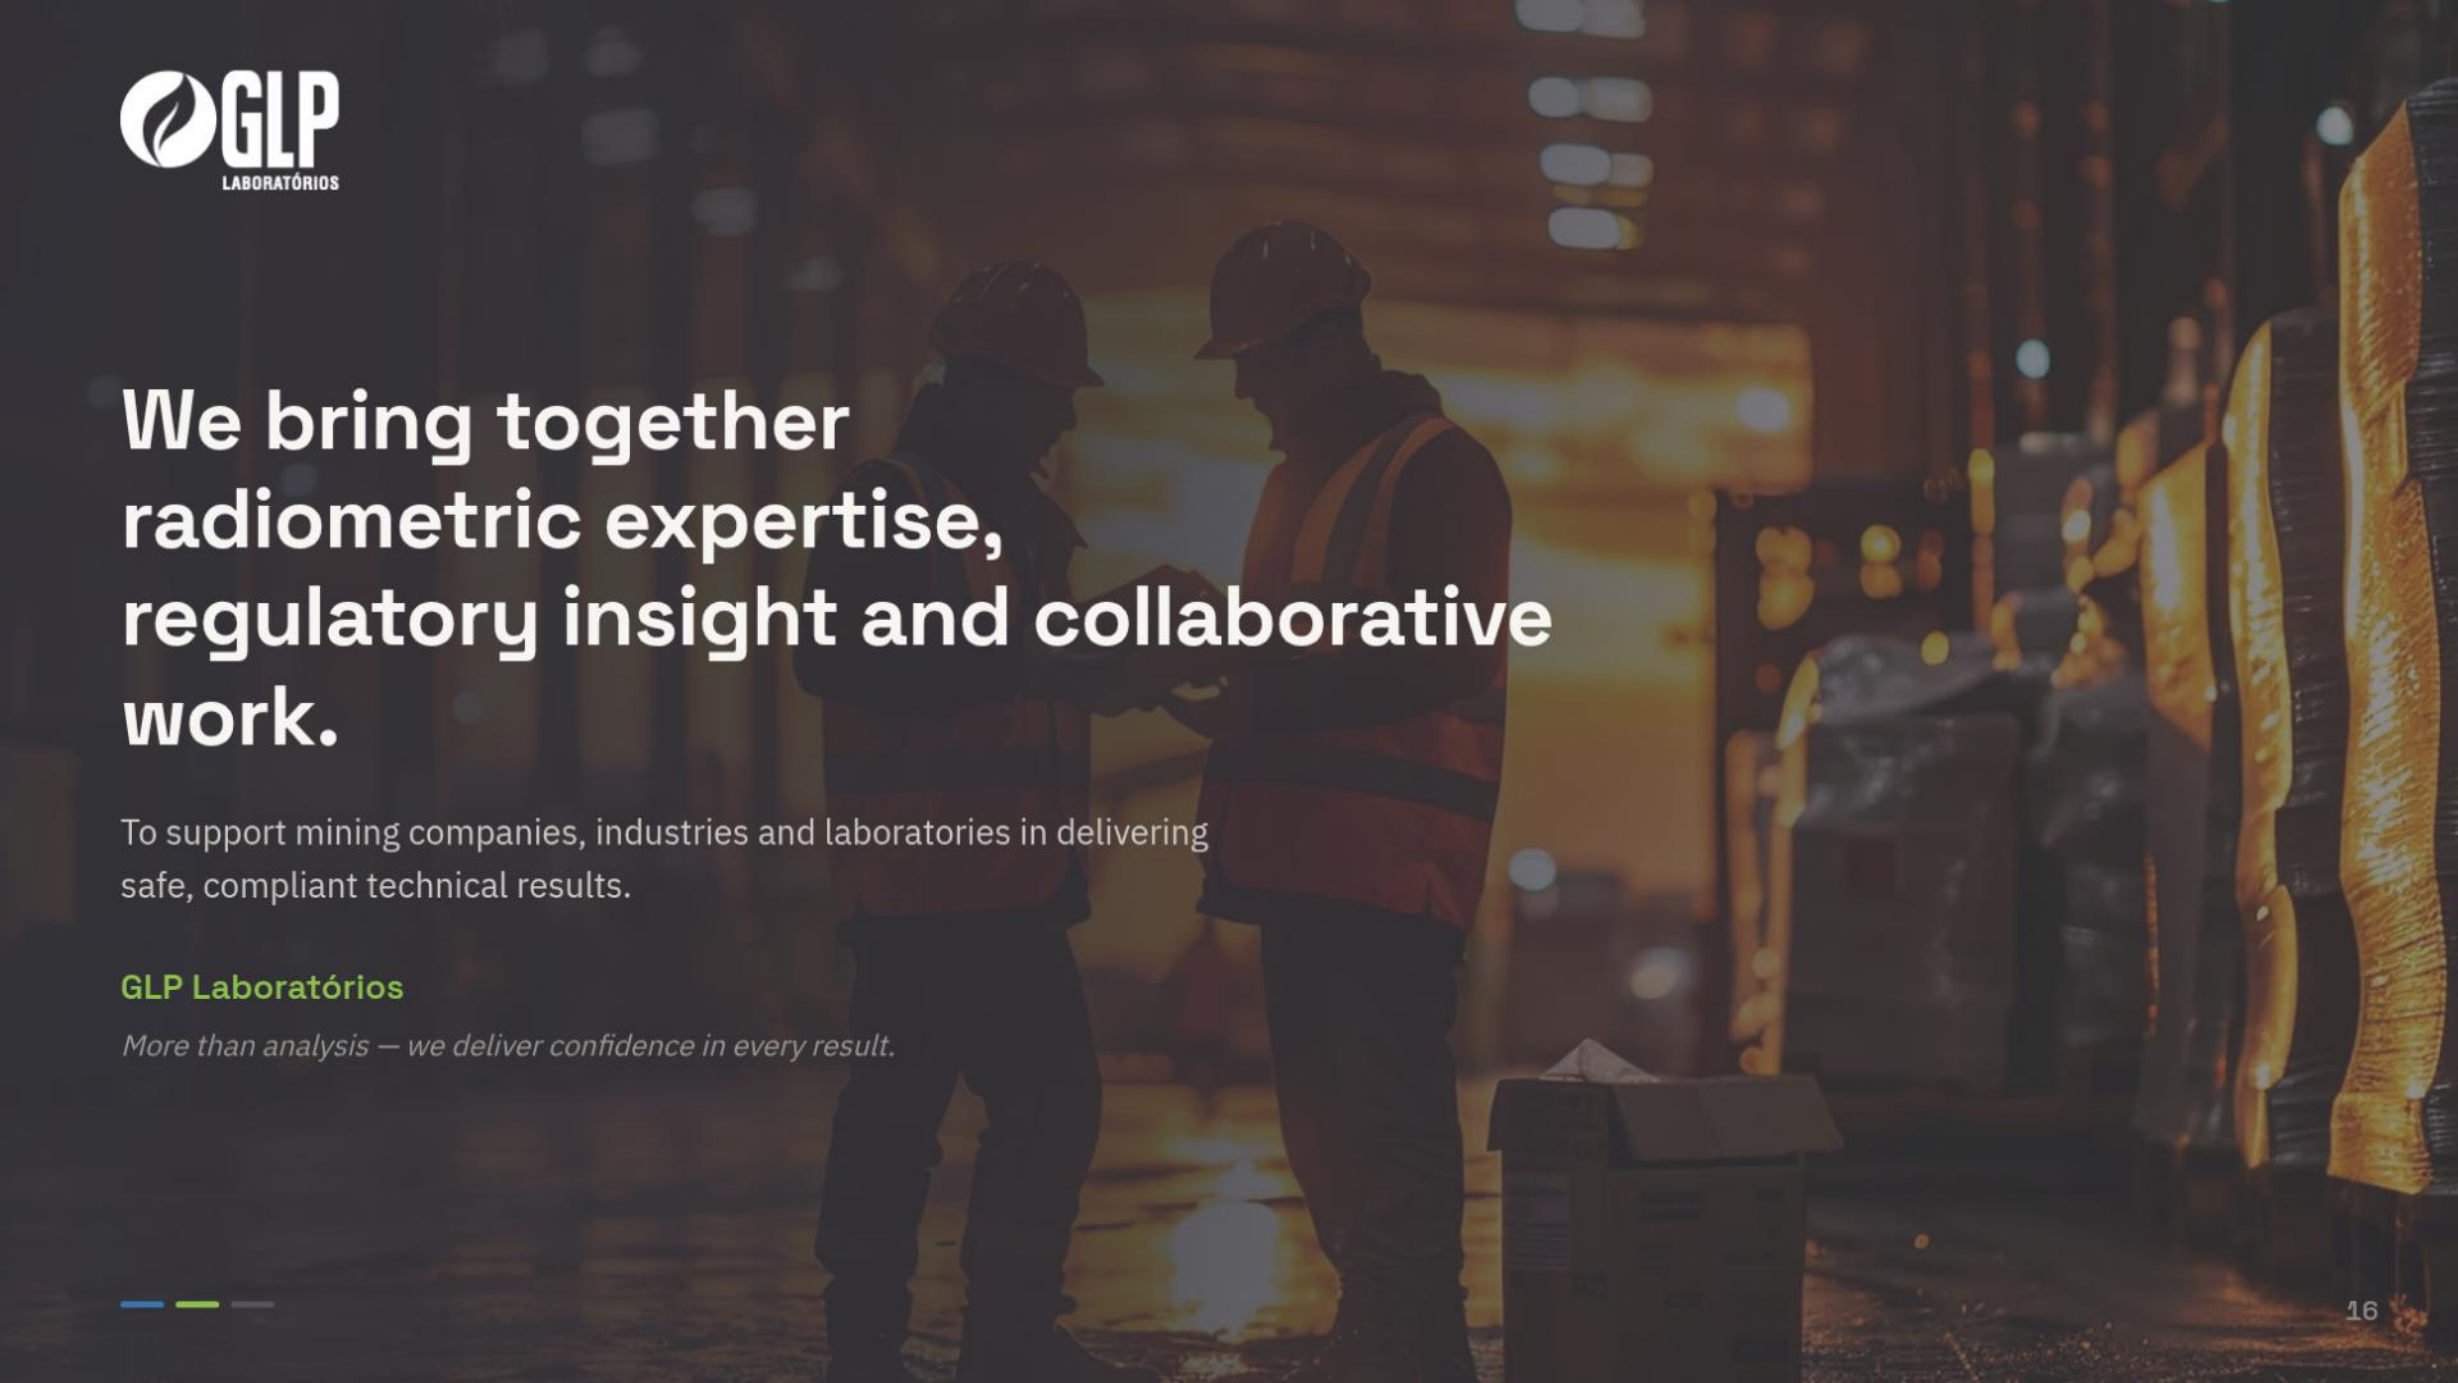

Technical relationships built with laboratories, industry, mining, food and energy sectors.

PETROBRAS · LARGO · CMOC 洛阳钼业 · mineração SERRA VERDE · Galvani A força das nossas raízes

BUREAU VERITAS · SGS · SGS GEOSOL · eurofins · ERM

CPEA · JABARRA RADIOPROTEÇÃO · AMG BRASIL · M. Dias Branco Sonhar, realizar, crescer · Seara

Technical portfolio spanning **multiple sectors** and specialized radiometric demands.

We bring together radiometric expertise, regulatory insight and collaborative work.

To support mining companies, industries and laboratories in delivering safe, compliant technical results.

GLP Laboratórios

More than analysis — we deliver confidence in every result.
